Agent & App Development Workshop

Promote to Production

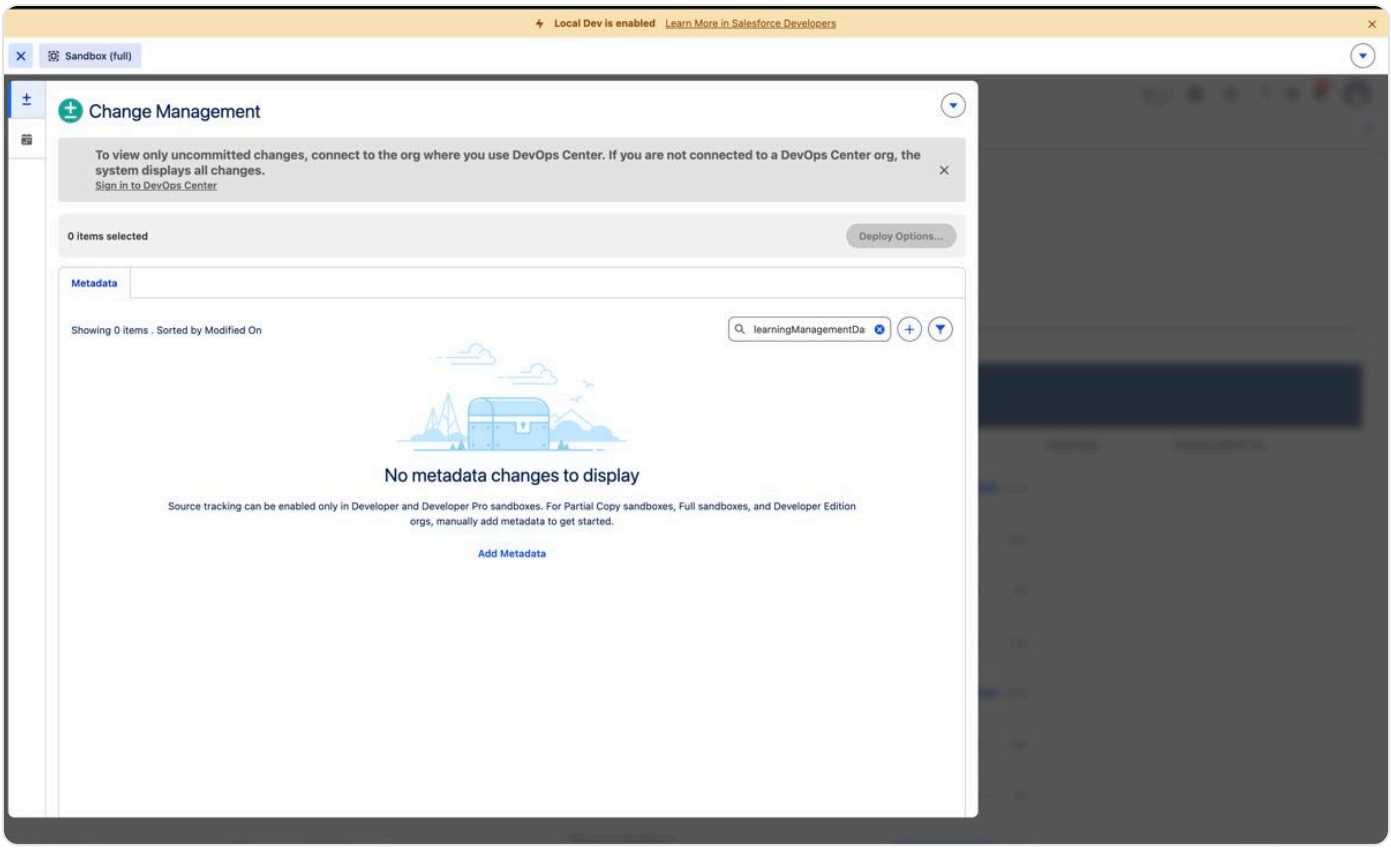

5 minutes

Your leaderboard is live in the sandbox. Now use **Change Management** to promote the changes from sandbox to production — no CLI, no package.xml, just point and click.

Open Change Management

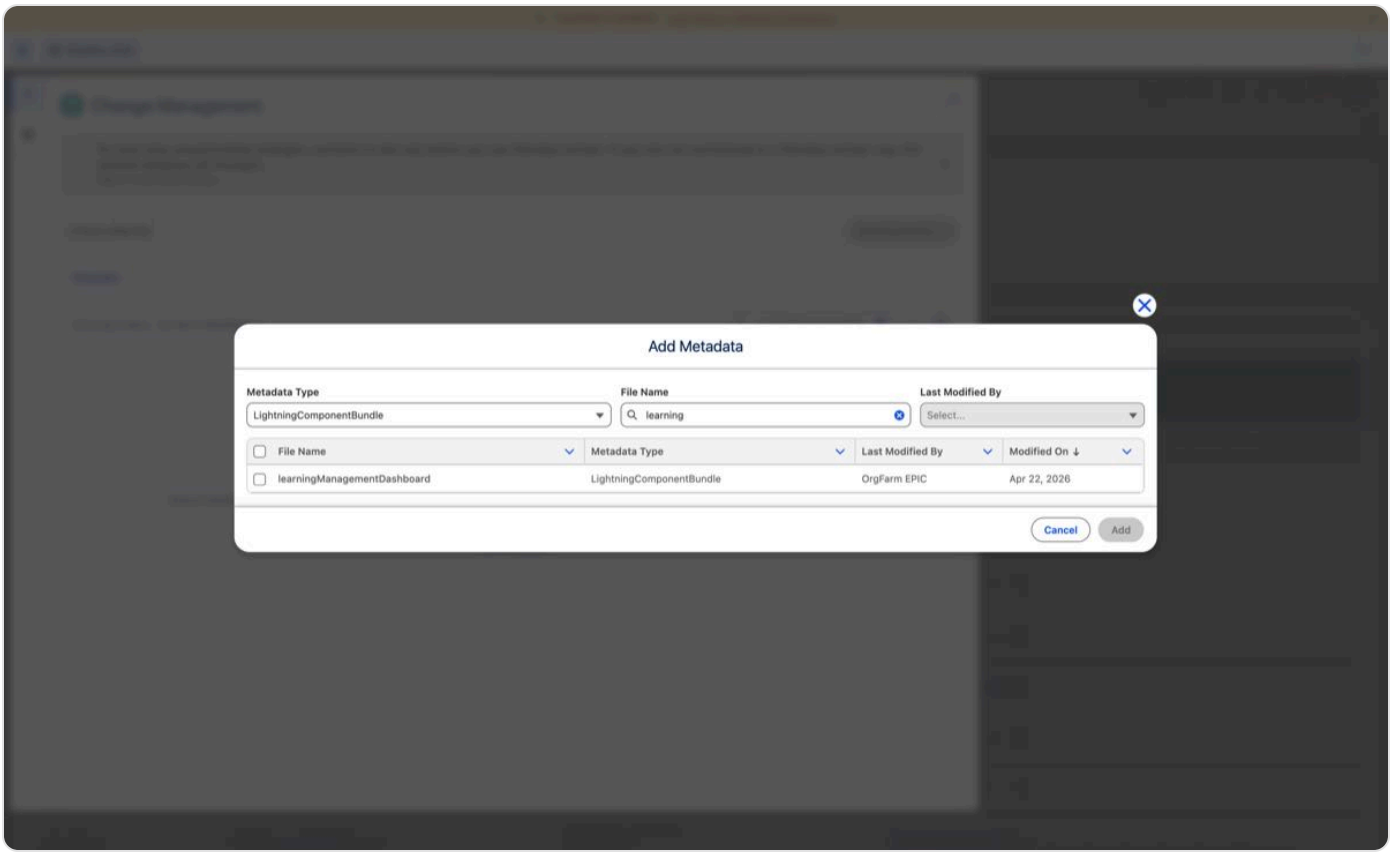

1. Open Change Management

In your sandbox, click the **Sandbox** badge in the top-left corner to open the DX Inspector. Since this is a Full sandbox, you'll need to manually add the metadata you want to deploy.

2. Add the LWC component

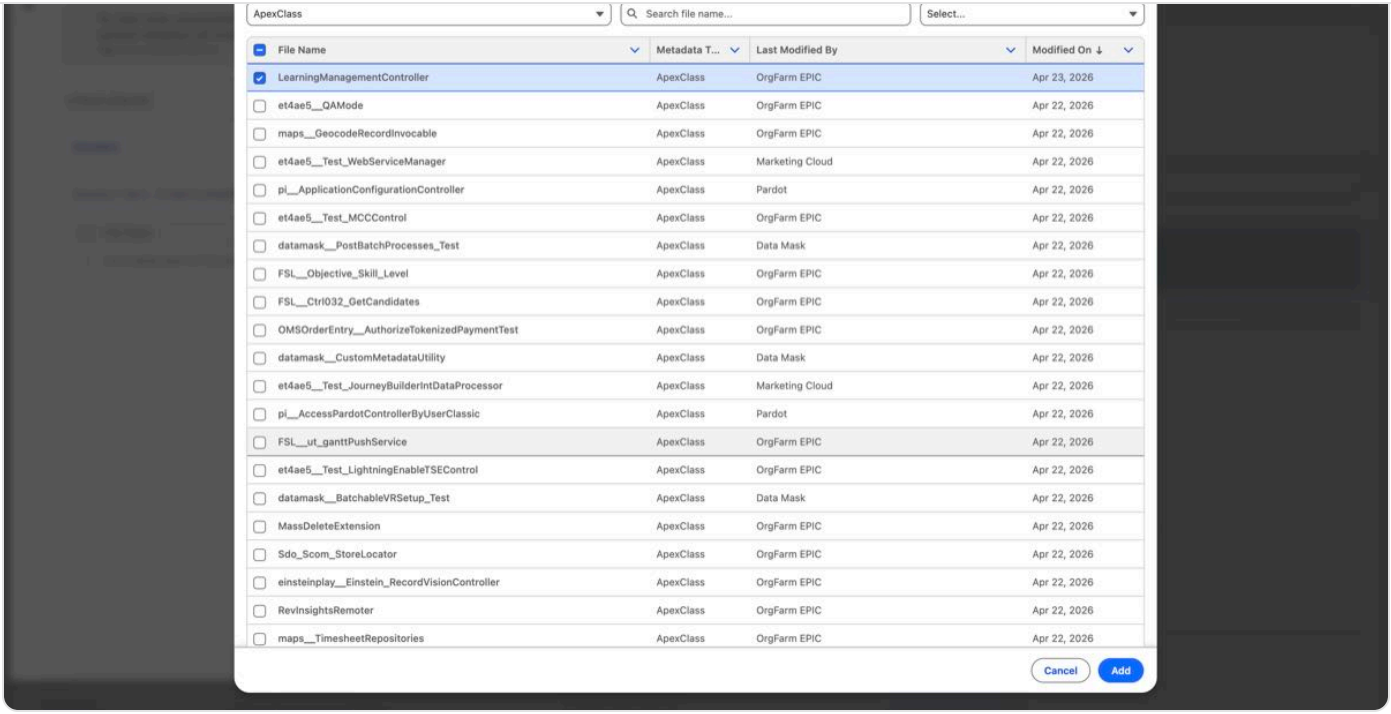

Click **Add Metadata** (the + icon). Set the Metadata Type to **LightningComponentBundle**, search for **learning**, select **learningManagementDashboard**, then click **Add**.

3. Add the Apex class

Click **Add Metadata** again. Set the Metadata Type to **ApexClass**, find and select **LearningManagementController**, then click **Add**.

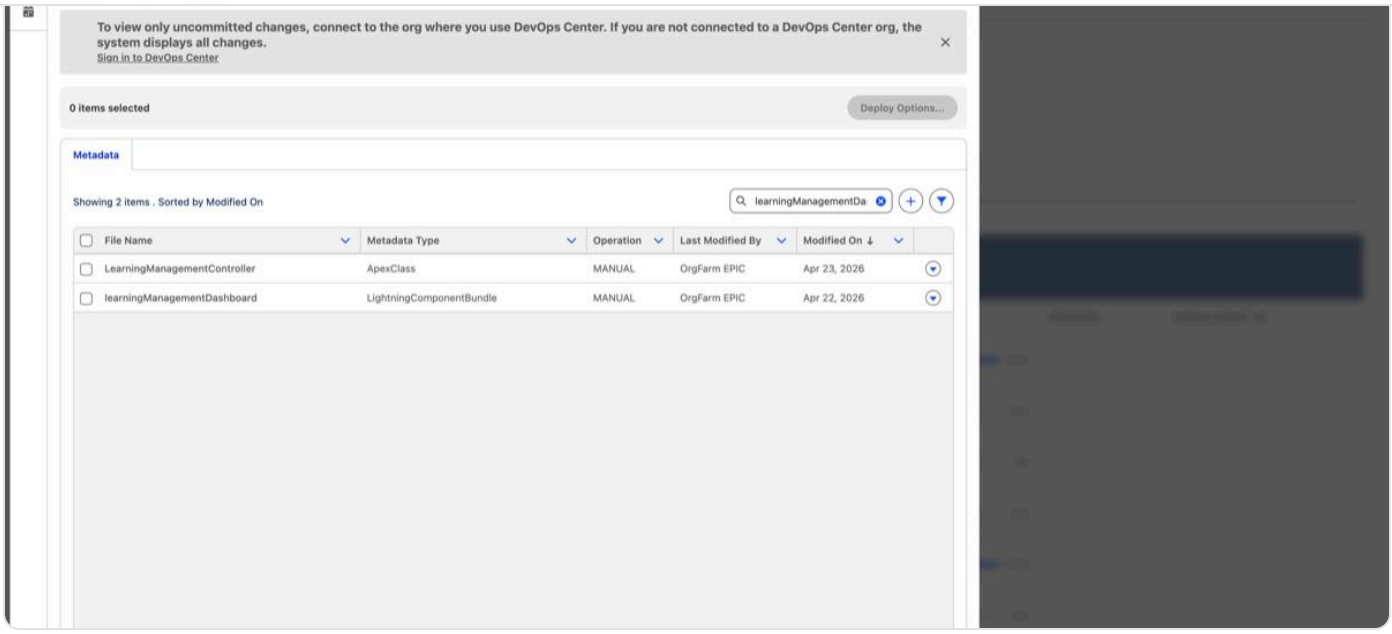

Agent & App Development Workshop

4. Review the metadata list

You should now see 2 items in the Change Management list:

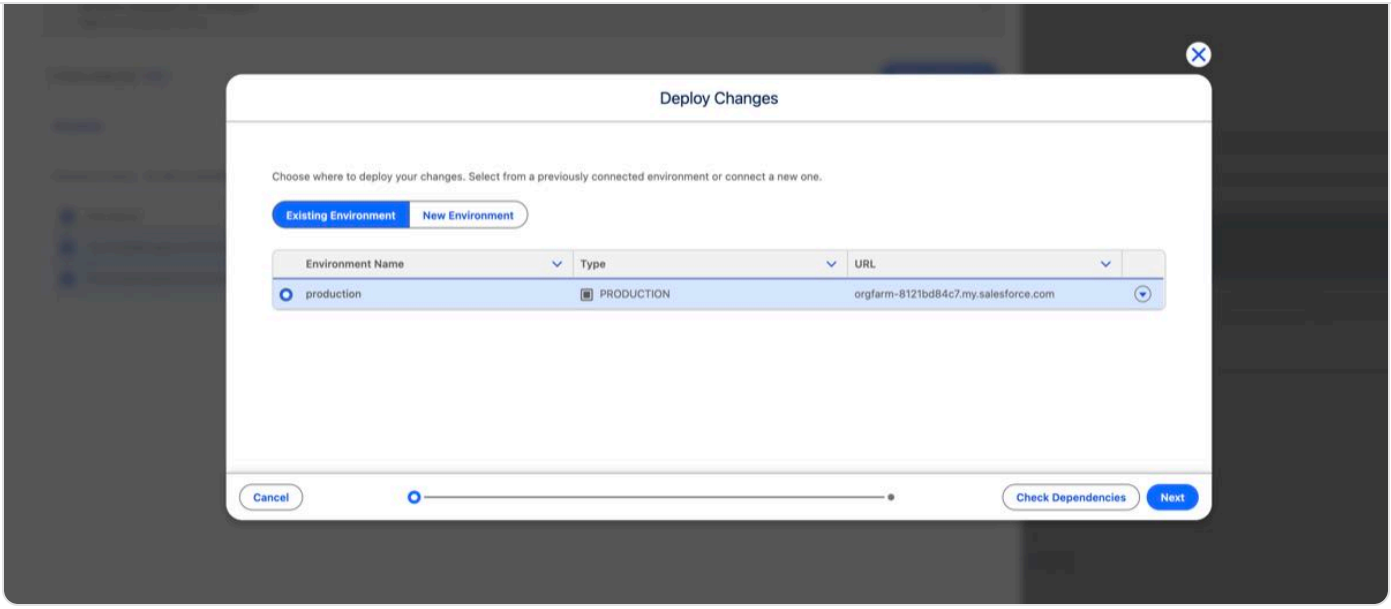

- **LearningManagementController** — ApexClass
- **learningManagementDashboard** — LightningComponentBundle

Connect to production

5. Select the existing production environment

Click **Deploy Options** to open the Deploy Changes dialog. Switch to the **Existing Environment** tab — you'll see the **production** org you connected during Part 1. Select it.

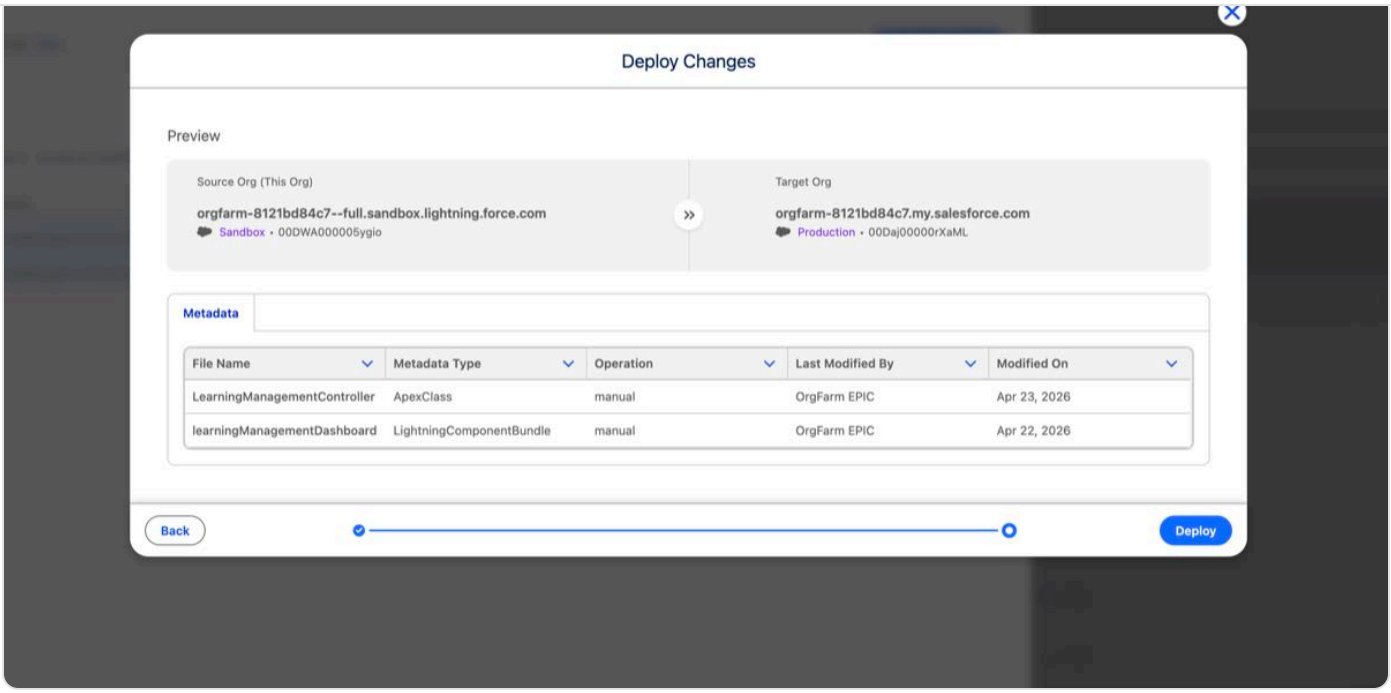

Deploy

6. Preview and deploy

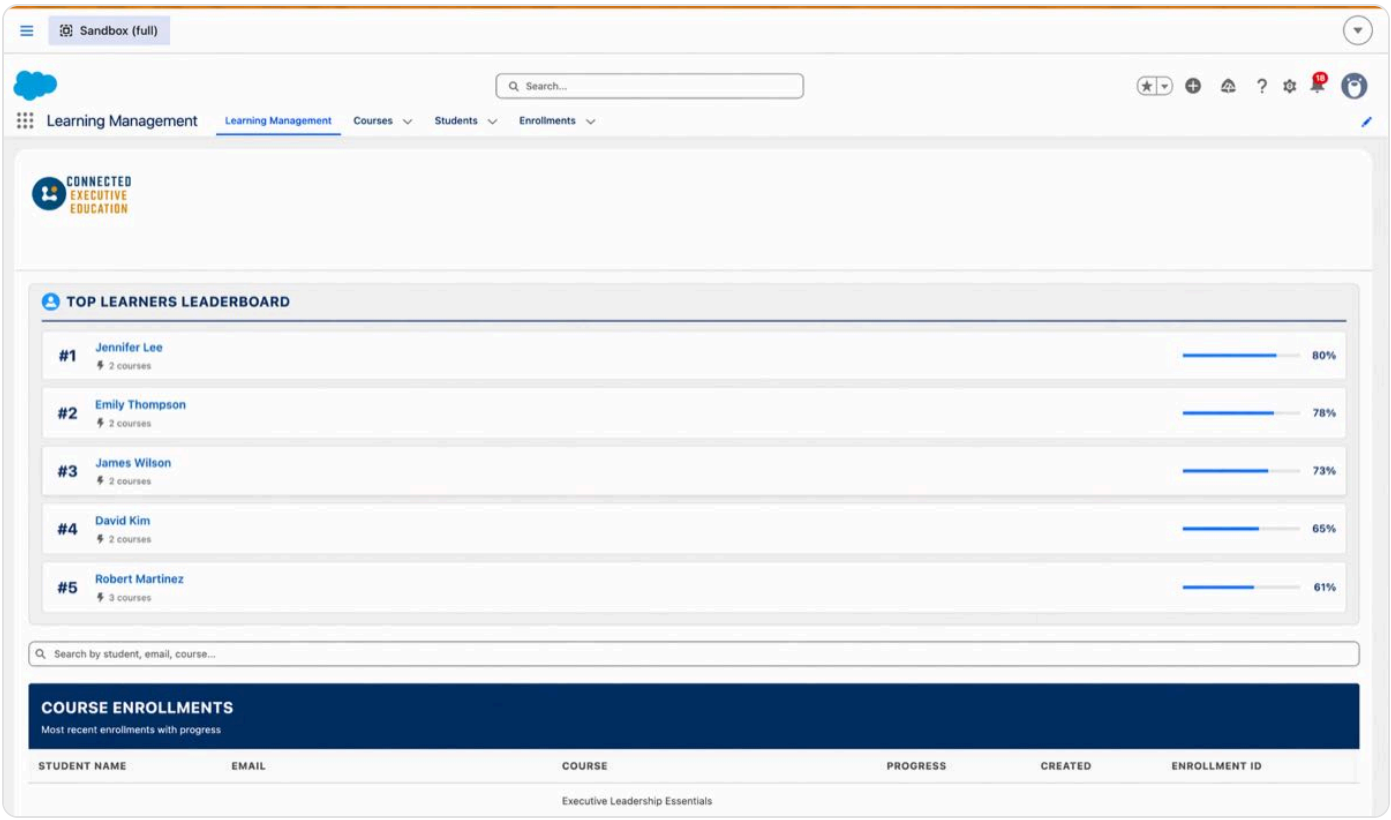

After authorization, you'll see the Deploy Changes preview showing the **Source Org** (your sandbox) and **Target Org** (production), along with the 2 metadata items. Click **Deploy**.

Agent & App Development Workshop

7. Verify in production

Wait a few minutes for the deployment to complete, then open your **production org** and navigate to the **Learning Management** app to verify the Top Learners Leaderboard is live.

promoting a new feature using Agentforce Vibes and Change Management. No CLI, no package.xml, no manual code.
