Agent & App Development Workshop

Setup

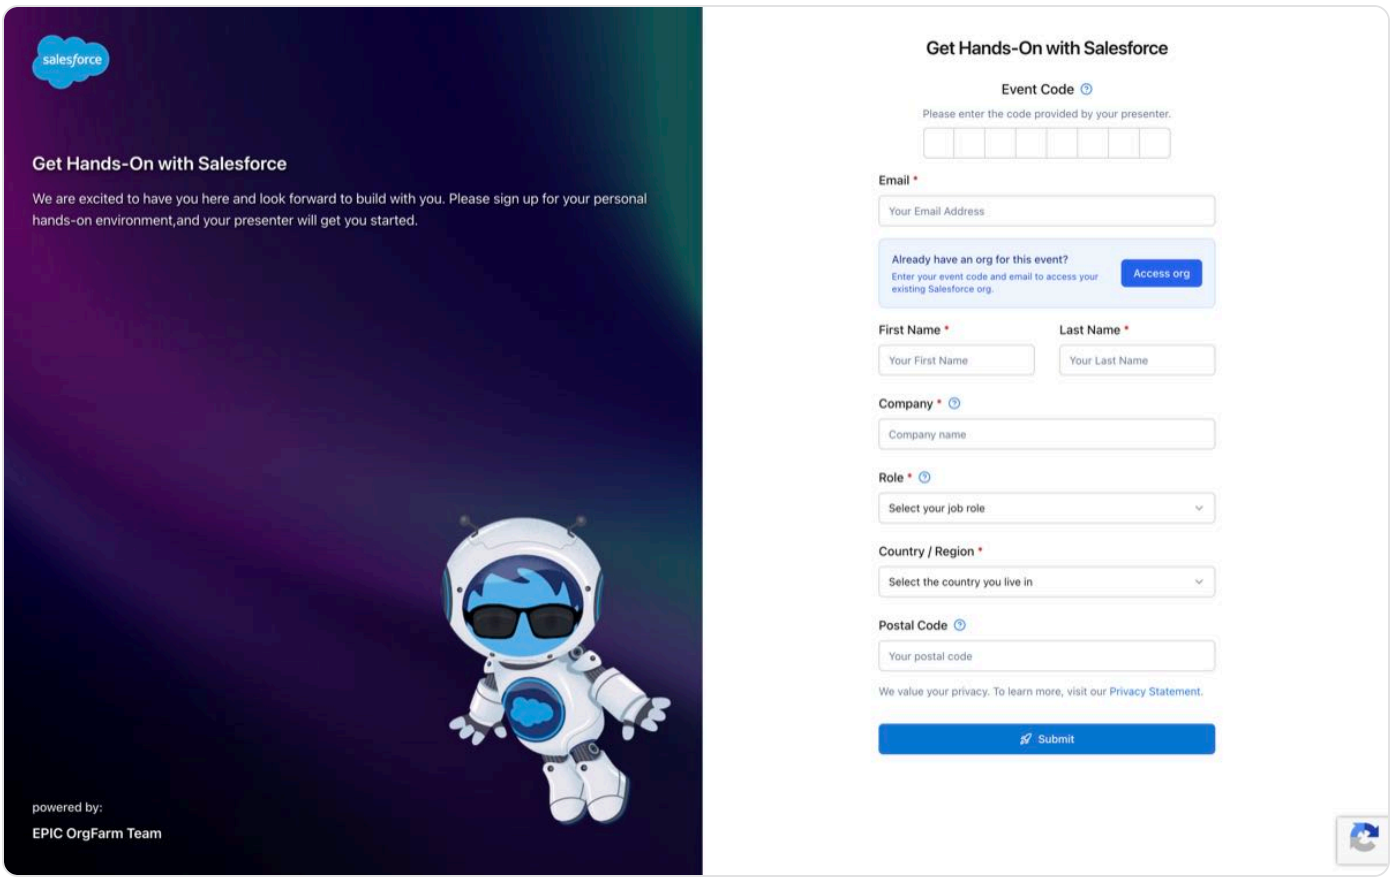

7 minutes

Complete these steps **before the workshop session** so you're ready to go when we start.

Sign up for your workshop org

1. Open the sign-up URL

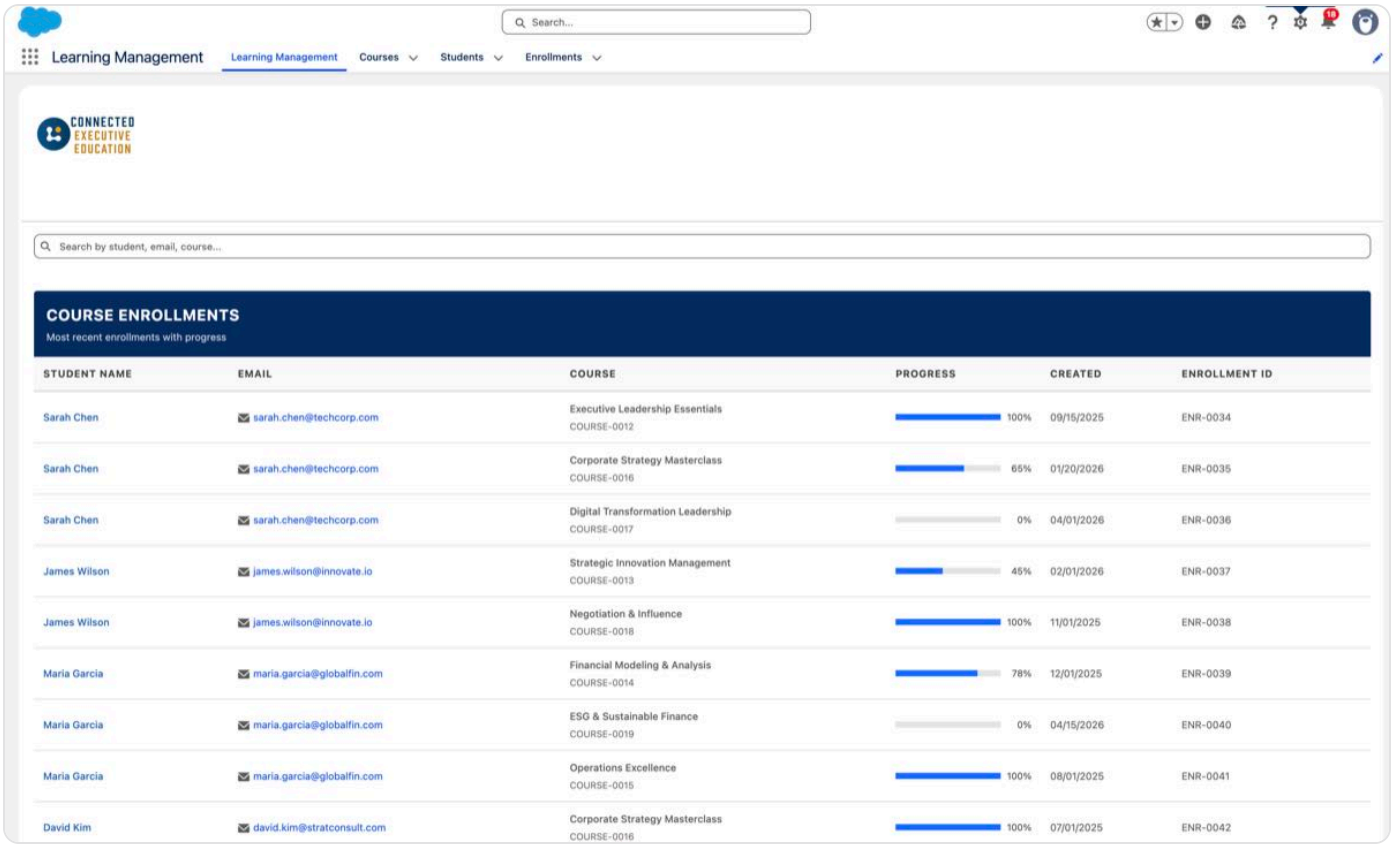

Navigate to the sign-up URL provided by your facilitator. Enter the **event code** and your **email address** — you'll receive org credentials by email. Click the link to open the org directly.

Save your credentials

2. Confirm you see the app

In your production org, click the **App Launcher** (the grid icon in the top left) and search for **Learning Management**. You should see the Connected Executive Education dashboard with a Course Enrollments table.

Log into your sandbox

3. Navigate to Sandboxes

In your production org, click the **gear icon** in the top right and select **Setup**. In the Quick Find box on the left, type `sandbox` and click **Sandboxes** under Environments.

4. Log into the fullcopy sandbox

If you need to log in again later, go to **test.salesforce.com**. The username is your production username with `.fullcopy` appended (e.g. `user@example.com.fullcopy`) and the password is `orgfarm1234`.

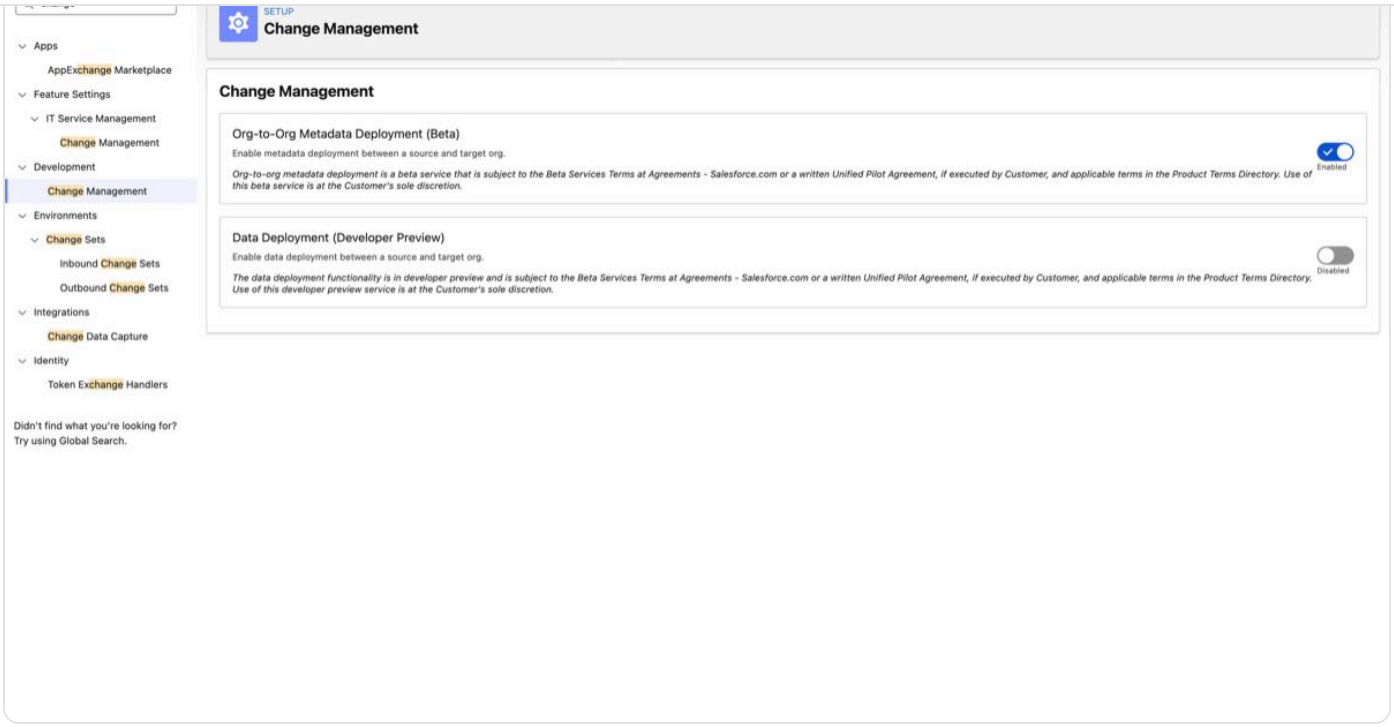

Action	Name	Type	Status	Location	Release Type	Current Org Id	Completed On	Description	Co
Clone | Log In |	full	Full	Completed	Hyperforce IND6S	Preview	00D9I000003Ey4D	4/25/2026, 8:12 AM	Automated Sandbox Request from brix	
Clone | Log In |	fullcopy	Full	Completed	Hyperforce IND8S	Preview	00DBI000002cyJm	4/27/2026, 4:02 PM	Automated Sandbox Request from brix	

Enable Change Management

5. Turn on Org-to-Org Metadata Deployment

Inside the fullcopy sandbox, go to **Setup** → search for `change` in Quick Find → **Change Management** under Development. Toggle on **Org-to-Org Metadata Deployment (Beta)**.

This enables metadata deployment between your sandbox and production — used in both Part 1 and Part 2.

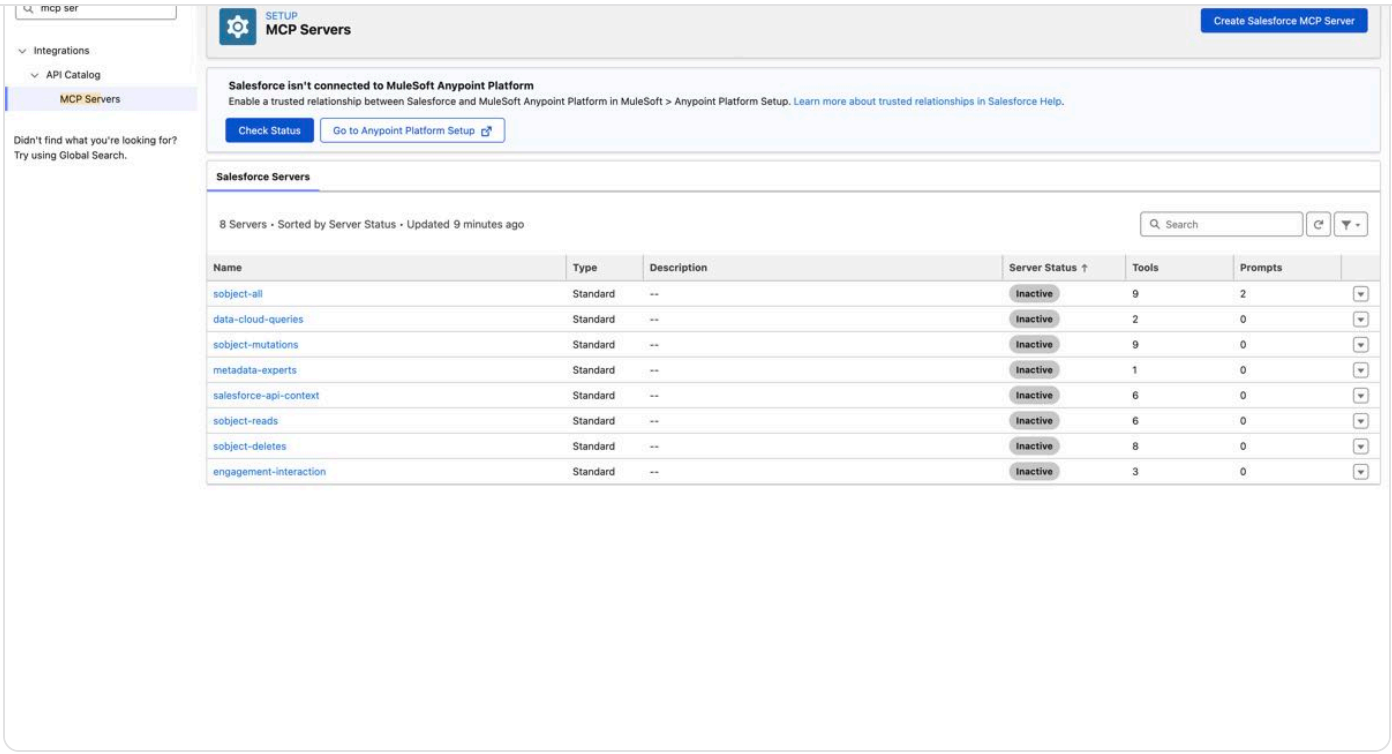

Activate MCP Servers

MCP (Model Context Protocol) servers connect Agentforce Vibes to your org's capabilities. You need to activate two servers — they're used in the AI-Accelerated path (Part 2) of the workshop.

6. Navigate to MCP Servers

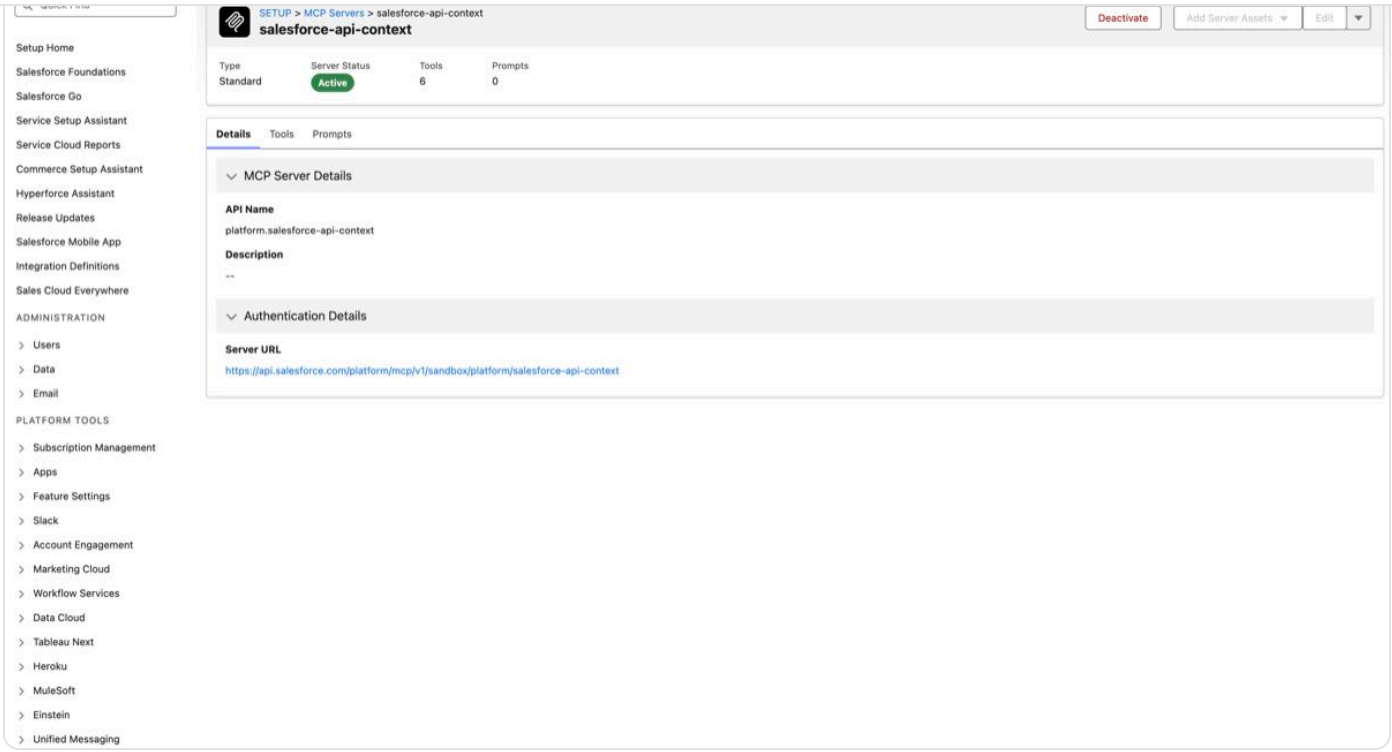

In your sandbox, go to **Setup** → search for `mcp ser` in Quick Find → **MCP Servers** under Integrations > API Catalog. You'll see a list of available servers, all with status **Inactive**.

Agent & App Development Workshop

7. Activate salesforce-api-context

Click **salesforce-api-context** from the list, then click **Activate**. This server provides Agentforce Vibes with Salesforce API context so it can generate code that works with your org's specific configuration.

8. Activate metadata-experts

Go back to the MCP Servers list and click **metadata-experts**, then click **Activate**. This server allows Agentforce Vibes to discover and inspect your org's metadata — objects, fields, relationships, and configurations.

> **Having trouble?**
>
> If you can't log in or don't see the Learning Management app, raise your hand at the start of the workshop and a facilitator will help you get set up.

Once you can see the app in your sandbox and the MCP servers are active, you're all set.
